CAREER PROFILE

Innovative software engineer with experience in full-stack development and machine learning technologies. Skilled in delivering scalable solutions, optimizing CI/CD pipelines, and contributing to all phases of the SDLC. Strong collaborator and problem-solver with a consistent record of meeting deadlines in fast-paced environments. Proven leader with meticulous attention to detail and strong analytical thinking skills.

EXPERIENCE

Paycom Software, Inc - Grapevine, TX

May 2023 – Present

Software Developer III

- Sole owner and subject-matter expert of internal SPA framework, driving all architectural decisions and full-stack development using scalable React patterns and comprehensive backend test coverage
- Developed customer facing, high impact features under strict timelines, including dynamic configuration tools, guided workflows, and globally released compliance workflows with 0 critical production issues post-release
- Delivered critical full-stack solutions for compliance, improving accuracy for over 37,500 clients
- Automated complex business workflows between client and internal systems, reducing manual processing
- Assumed product and QA responsibilities post-restructuring, defining requirements, prioritizing work, and ensuring production quality
- Modernized legacy systems and reduced technical debt through refactoring, improving long-term maintainability
- Mentored and onboarded engineers, serving as primary technical resource and accelerating team productivity

The CBORD Group - Waco, TX

April 2022 – May 2023

Associate Software Developer

- Built front-end and back-end features for software used by over 500 institutions, improving usability and functionality for a wide client base through React and PHP
- Resolved an average of 10+ production issues per week, ensuring timely bug fixes and system stability
- Collaborated with senior engineers in an Agile environment, contributing to sprint planning and code reviews

SKILLS

Programming Languages: C++, Java, JavaScript, Python, PHP, C

Tools: Git, Docker, Bash, Unreal

Web Technologies: React.js, Typescript, HTML, Rest API, GraphQL

Data Bases: SQL, Oracle

EDUCATION

BAYLOR UNIVERSITY - Waco, Texas

Bachelor of Science in Computer Science – GPA: 3.59

- Relevant Coursework: Software Engineering, Data Communications, Data Mining, Operating Systems, Algorithms, Data Structures, Database Design, Linear Algebra

PROJECTS

Advanced Leopard Seal Recognition System (ALSRS) – Python, Java, TypeScript

April 2024

- Engineered machine learning project to detect and identify leopard seals, integrating API and frontend interface
- Applied Mask R-CNN and Faster R-CNN for seal detection, achieving 90% and 98% accuracy respectively
- Implemented DeiT model for seal identification reaching 99% top-5 accuracy and enabling accurate recognition for research purposes

Savings and Budget Data Mining Application – Python

December 2022

- Led team to create a personalized financial planning system by leveraging banking transaction data, producing customized savings goals and budget plans for users
- Applied advanced data mining techniques, such as autoencoders, sentence transformers, and SVMs
